

## **Bank One Market Street Parking Garage Indianapolis, Indiana**

This project includes an eight level, 1720 car parking garage, two interior stairs, and two exterior stair/elevator towers. The fascia consists of either precast load-bearing spandrel beams or precast non-load-bearing spandrel panels.

Structural features:

Pre-topped precast concrete frame with cast-in-place concrete pour strips, typical bay size: 30' x 54'.

Two exterior stair/elevator towers utilizing steel rigid frames structurally isolated from parking structure.

Parking structure's lateral loads resisted by precast concrete frame action utilizing thread-bar post-tensioning.
