

**Indiana University  
Jordan Street Parking Garage  
Bloomington, Indiana**

This project consists of a two-level, 650-car parking garage located on Indiana University's Bloomington campus. The cladding of the parking structure is limestone. The structure is a cast-in-place, post-tensioned concrete frame with microsilica concrete, in encapsulated microstand post-tensioned system, and epoxy coated reinforcement to enhance durability.

The grade adjacent to the parking structure allows for entry/exit directly to each level and eliminates the need for a ramp within the garage, while reducing the construction cost.

Project Owner: Indiana University  
Mr. Dave Smith  
812-855-3525

Schedule: Target: November 1995  
Actual: November 1995

Cost: Budget: \$2,950,000  
Actual: \$2,887,000
